

Certificate of Compatibility

Ramada SP80 & Dexion Speedlock Mk3[®] Pallet Racking

Ramada first started manufacturing the original Dexion products under licence in Portugal in 1958, adding Speedlock Mk3[®] in 1972. When the licences lapsed several years ago, Ramada continued to manufacture a range of racking and shelving products, enhancing and improving some aspects of them to suit current European markets and EC markets.

Ramada's current 'SP80' pallet racking system is founded on the original Dexion Speedlock Mk3[®] product and has been engineered to comply with the latest F.E.M. 10.2.02 European design standards. All the major components, including uprights, beams, and bracing, remain fully compatible and interchangeable - both physically and structurally - with the original Speedlock Mk3[®] offering, as previously sold in the UK and throughout the world.

Having carried out extensive structural and metallurgical tests in our laboratories on our SP80 and Dexion Speedlock product sections, we can confirm that **Ramada SP80 Pallet Racking** can be safely used for repairs, additions, and extensions to the original Speedlock Mk3[®] product, which was manufactured by Dexion Ltd in the UK up to May 2003.
